MediaWiki 1.19.14+dfsg-1 installation

Welcome to MediaWiki!

Environmental checks

Basic checks are performed to see if this environment is suitable for MediaWiki installation. You should provide the results of these checks if you need help during installation.

- PHP 5.5.9-1ubuntu4.14 is installed.
- Found ImageMagick:
`/usr/bin/convert.`
Image thumbnailing will be enabled if you enable uploads.
- Using server name
"http://107.191.52.183".
- Using server URL "http://107.191.52.183/mediawiki".
- Using the [intl PECL extension](#) for Unicode normalization.

The environment has been checked. You can install MediaWiki.

EITCSSA wiki

Project namespace:

[?](#) [help](#)

Following Wikipedia's example, many wikis keep their policy pages separate from their content pages, in a "**project namespace**". All page titles in this namespace start with a certain prefix, which you can specify here. Traditionally, this prefix is derived from the name of the wiki, but it cannot contain punctuation characters such as "#" or ":".

- ☒ Same as the wiki name: EITCSSA_wiki
- ☐ Project
- ☐ Other (specify)

Administrator account

Your name:

[?](#) [help](#)

Enter your preferred username here, for example "Joe Bloggs". This is the name you will use to log in to the wiki.

eitcssa

Password:

.....

Password again:

.....

E-mail address:

 [help](#)

Enter an e-mail address here to allow you to receive e-mail from other users on the wiki, reset your password, and be notified of changes to pages on your watchlist. You can leave this field empty.

 [help](#)

☐ Subscribe to the [release announcements mailing list](#) .

You are almost done! You can now skip the remaining configuration and install the wiki right now.

- ☐ Ask me more questions.
- ☒ I'm bored already, just install the wiki.

MediaWiki 1.19.14+dfsg-1 installation

Complete!

Congratulations! You have successfully installed MediaWiki.

The installer has generated a `LocalSettings.php` file. It contains all your configuration.

You will need to download it and put it in the base of your wiki installation (the same directory as `index.php`). The download should have started automatically.

If the download was not offered, or if you cancelled it, you can restart the download by clicking the link below:

[Download LocalSettings.php](#)

Note: If you do not do this now, this generated configuration file will not be available to you later if you exit the installation without downloading it.

When that has been done, you can [enter your wiki](#) .
